

INTERNET ACCOUNTING

A ready-to-go Internet Accounting Solution for the Broadband industry, ISP's, Telco's and service providers.

Why?

The reason for advanced internet accounting is:

- to charge for internet usage
- to charge based on advanced models in addition to usage
- to charge based on service types or quality destination time individual information
- to increase billing possibilities

What?

All relevant data from IP traffic like,

- ID's and locations data
- Usage & consumption
- Traffic and service types
- Timestamps and duration

How?

Internet accounting is a complex process

- Large amount of network data.
- Advanced rule-sets and rules
- Effective and scalable solution needed!!
- Massive filtering, aggregation and compression must be performed close to network source and before storage
- Network should not be impacted => need for distributed processing and highly efficient compression

Panther Applications Internet Accounting Solution (IAS) offers a ready-to-go solution

Functional Structure
May 2008

Advantages

- The advantages of the Panther IAS solution are:
- Reliable rating and accounting
 - Advanced analysis- and reporting features
 - Well proven solution – production environment since 2002
 - Open platform easily integrated with ERP
 - Fully independent of network vendors and network infrastructures
 - Fully contained solution, no external access or systems needed for retrieval of information
 - Business intelligence possibilities on traffic, services usage etc
 - Optional detection of unusual network behaviours, such as worms, virus and attacks
 - Fully scalable (modular) solution built on quality IBM configurations

Cost Benefit

Clear cost-benefit parameters contains:

- Generate valuable knowledge on usage patterns
→ who uses what bandwidth, service etc
→ new charging patterns
- Create a full understanding of relations between cost and charging data and revenue
→ no surprises, no extra cost
- Ready-to-go solution for swift implementation
→ no development, no extra specialist
- Minimises network impact
→ independent from network vendors
- Simple administration and operation
→ no requirement for specialists
- Scalable architecture that grows with your customer base
→ Fully scalable hardware and software configurations

IAS is the solution for all your Internet Accounting challenges

Efficient Robust Scalable Easy to use
